**Subject:** Expera Office Lateral into HOV Interceptor  
**Attachments:** Expera Office Lateral.pdf

Good Afternoon Mr. Geurts,

The City of Kaukauna would like to request a connection of an existing sanitary sewer lateral into the HOV interceptor line. The lateral is a 4" (field verify size) service for the Expera office building at the Elm Street and Thilmany Rd intersection. Please see the attached sketch.

If the connection were possible, the City would propose an I&I reduction project, which would abandon and fill 1,824 lineal feet of 24" concrete sewer pipe(former City interceptor sewer), and 4 sanitary manholes, under the Expera log yard and coal yard. We would also bulkhead 2- 12" lines and 3 manholes near meter station 5N. These smaller lines would not be filled, as they may serve as a future conduit under the rails if anything were to develop in that area on Expera property.

At this time, the City would like to investigate if the sewer connection would be acceptable to HOV, discuss any concerns, and evaluate any special requirements which may be involved with such a proposal. If the proposal is found to be acceptable, the City would then coordinate any construction projects with Expera.

Thank you for any recommendations or feedback.
