

Operations Update

Plant Operations – Treatment and operations continue to be doing well for the month of July.

Plant/Kruger SCADA Computers – Due to vacations, installation of the SCADA computers is the week of August 14th. The ATAD programing changes will be accomplished during that time as well.

Maintenance Update

Mitsubishi Air Conditioning ACTI-FLO – At last month's meeting I mentioned the air conditioning went out for the ACTI-FLO MCC room. I received the two quotes; one from EC&D for \$5,840.00, and the other from ACC Planned Service for \$5,016.00. I have ACC Planned Service replacing the unit.

Process Return Pump Drives – Installed last month and are doing great.

Bio-solids storage tank valves – Still in the process of pumping the contents of storage tank 2 into storage tank 1. No update on the valve repair needed or what the floor condition is.

Driveway Seal Coating – Finally had a weekend where there was no rain forecasted and AC Asphalt Specialists were able to come in and seal the driveway/parking lot. This was supposed to be accomplished in 2016 but due to weather it had been postponed until 2017. There was \$17,000 budgeted for this in 2016 due to a quote I received from another company, however AC Asphalt had quoted 8,540.00

Biostyr Blower – There is one blower that had a bearing failure which has been removed and sent into Aerzen for a standard overhaul. The standard overhaul cost is \$4,070.00. If there are more costs associated to it due to items not covered under the normal rebuild, I will determine at that time whether a new blower will be the most economical route. A new blower costs approximately \$8,400.00
