

## **Old and New Business (updates) 10-13-20**

### **Influent sewage sampling – WSLH covid testing**

- The District was accepted for participation and influent sampling in the WSLH program. To date, three influent samples have been sent out for analysis. We have not yet seen any results or numbers from the first samples that were sent in.

### **Landfill SSA amendment / Leachate**

- East Central approved of splitting the landfill parcel for Sewer Service area purposes with the selection of Option #2 with Appleton WWTF getting the leachate from the yet to be built NW landfill cell
- Option two fulfills the two major District concerns – one being no additional leachate being conveyed to HOVMSD and the other being no more additional ammonia loading.
- The landfill plans to install a pretreatment device that is estimated to remove 70% of ammonia and 50% of its BOD load. The landfill will pilot the Xogen device in 2021 with pretreatment of HOVMSD leachate pretreatment to be in place in 2023.
- We will put together estimates on how much organic capacity the district may regain for ammonia and BOD for the next Commission meeting
