

Operations Update

Plant Operations – Plant operations and treatment were good during the month of June.

Ethernet to Device net Module – Received the spare sooner than expected! One month instead of six months.

United Liquid Waste Haulers – United is planning on hauling bio-solids as soon as wheat is coming off the fields, around the end of July. United Liquid Waste's contract is in its last year and unfortunately they are not interested in renewing.

Seven Oaks Land Rental – The rental agreement for the farmland with Seven Oaks expires at the end of 2022. Brian and I had a very good meeting with Jon Lamers. A few things from that meeting that we are looking to change are the land rental cost, length of rental agreement, and option to purchase if the District decides to sell any of the land. (a discussion point)

Maintenance Update

ATAD Jet Mix Pumps – Waiting on ship dates from Sulzer Pumps.

Peak Flow Pump #3 VFD – No update.

DAFT Pressure Vessel Tanks – The pressure vessels are on order.

Heating/Air Conditioning Unit – Last month I mentioned a unit on the solids building which needs replacement. Still waiting on two quotes to come in-will have an update next month.
