

Tulips in bloom

Brian Roebke photo

Bob Roebke's tulips came into bloom last week in Kaukauna.

Interceptor bypass line to run through Kaukauna

A temporary sewer bypass pipe will be placed in the Lower Fox River this week (weather permitting) as part of Heart of the Valley Metropolitan Sewerage District's Interceptor Rehabilitation Project. The bypass pipe will be in use between approximately May and November.

The bypass pipe for this project area will be installed in the guard lock from the Kaukauna Power dam (at Highway 55/Lawe Street bridge) east to Lock 1.

For boating safety, the pipe will be submerged to provide approximately four (4) feet of clearance and will be marked with two navigational hazard buoys. Boaters should not navigate close to the buoys and may safely cross the submerged pipe in the center of the canal (generally east of Island/Catherine Street). Boaters should still practice

caution when crossing the pipe and may wish to trim their motor and raise any trailing devices above water.

"We appreciate the community's assistance and patience as we rehabilitate this critical piece of infrastructure," explained HOVMSD District Director Brian Helminger. "We also hope they have a fun and safe boating season!"

HOVMSD will be providing project updates on its website at hvmsd.org/interceptor-rehabilitation-project/, to local media, member communities and community partners, such as Fox Locks, for use in their social media and other communications. Boaters are encouraged to contact the project team with questions or concerns throughout the duration of the project at interceptor.feedback@hvmsd.org or toll free at 833-468-6730.
